

The Sunlit Wanderer — Portrait Site Architecture

Reference document — keep this. Companion to *The Sunlit Wanderer Portrait Site Requirements v1.0*. Last updated: August 31, 2026 See also: *Requirements Changelog v1.1* — the authoritative list of amendments.

What we're building with, in plain language

Astro is the framework. It turns your content files into plain HTML pages. No database, no login, nothing to keep patched. Pages load fast on a phone because there's almost no code running — just the page itself. This is what makes the accessibility and performance requirements (§45, §46) achievable rather than aspirational.

Cloudflare Pages is the host. Free. It watches your GitHub repository, and every time something changes it rebuilds the site automatically and gives you a preview link before anything goes live.

GitHub is where the files live. It keeps every version forever, so "restore the previous production version" (§58) is a real button, not a hope.

The workflow: Claude writes files → you upload to GitHub → Cloudflare builds a preview → you look at it on your phone → you approve → it goes live. Editing and publishing stay separate, which is what §56 requires.

The folder structure

|— HOW_TO_UPDATE_SITE.md ← your instruction manual (§61)

|— CONTENT_CHECKLIST.md ← what's still missing (§53)

|— REQUIREMENTS_CHANGELOG.md ← amendments to v1.0

The short version: if you ever poke around yourself, stay inside `src/content/` and `public/images/`. Everything else is machinery.

What each content file holds

`site.json` — the one file that changes everything

Every external link on the site, in one place. Change it here, it updates everywhere it appears (§52).

Holds: ShootProof booking URLs (one general + three per-tier) · Messenger link · Google Voice number · Facebook · Instagram · TikTok · Pinterest profile · all twelve Pinterest board URLs · Shopify shop link · service area wording · site title and meta description.

Example request: "Change the ShootProof booking link." One edit, one file.

`pricing.json`

The three tiers. Name, price, duration, minimum image count, what it's best for, the full description, and what's included.

Currently: **Short \$150 · Full \$275 · Extended \$475**

Also records the labor basis per tier (~3 / ~6 / ~10 hours) so future pricing has a baseline.

Example request: "Raise Full to \$295." One edit, updates the homepage cards, every session page, and the pricing section.

`reviews.json`

Each review has the text, the client's name (first name + last initial), and a **placement** field saying where it appears — homepage, families, seniors, or couples.

Example request: "Swap the Seniors review for a new one." Replace one entry.

faq/ — five files

One general FAQ for the homepage, one per session category. Each entry is a question and an answer. They render as the collapsible accordions in §17.

Example request: "Add a question about pets to the Families FAQ." One new entry in one file.

locations/ — one file per location

Each holds the fields from §9: name, short description, best for, walking level, restrooms, parking, accessibility, best seasons, image list, optional video, booking link, and status.

Two things worth knowing:

Unknown fields stay empty and simply don't display. If you haven't confirmed whether Carriage Hill has restrooms, leave it blank — the site shows nothing rather than a gap.

*The **status** field controls visibility.* Set it to **draft** and the location exists in the files but doesn't appear on the site. That's how Germantown Dam and Cox Arboretum will work — built, waiting for photographs, invisible until you flip them to **published**.

galleries/ — five files

Just ordered lists of image filenames with their alt text. The homepage mixed gallery, plus one per category.

Example request: "Replace images 3, 7, and 12 in the Seniors gallery." Swap three filenames.

copy/ — the written content

Markdown files, which is plain text with light formatting. This is where your actual voice lives — the family philosophy, the senior planning language, the maternity timing explanation, the Prepare section.

You can edit these directly if you want. They read like a document, not like code.

Where images go

Drop them in the matching folder under `public/images/`, then reference the filename in the right gallery file.

Naming convention — lowercase, hyphens, no spaces:

`families-wegerzyn-autumn-01.jpg`, `seniors-oregon-district-03.jpg`

Spaces and capital letters cause problems on some servers. This avoids a category of bug you'd otherwise spend an afternoon on.

Sizing: export the long edge at about 2000px, quality 80. Big enough to look excellent on any screen, small enough to load fast on a phone. Astro generates the smaller versions automatically.

The three documents that live alongside the site

HOW_TO_UPDATE_SITE.md — written for you, not for a developer. Where everything lives, how to change pricing, how to swap images, how previews work, how to roll back, and what not to touch.

CONTENT_CHECKLIST.md — every placeholder and missing asset, tracked openly (\$53). Nothing gets quietly forgotten.

REQUIREMENTS_CHANGELOG.md — amendments to v1.0, so the original document stays intact and you're never rewriting 46 pages.

Amendments to Requirements v1.0

§

Change

- 6 Extended Session: **\$475** (was \$425). Effective rate ~\$47.50/hr, in line with Short and Full.
- 7 Session tier names locked: **Short / Full / Extended**.
- 6, 28 Portfolio images require a current signed release. Julie will re-obtain releases from prior clients. Standard going forward from 2026. Galleries populate as releases return — not a launch blocker.
- 8 Reviews finalized. Homepage: Curtis H., Marianne M., Emily A. Families: Chris L. Seniors: Brie F. Couples: Jamie P. Single initial format throughout. Maternity has no review; slot stays empty.
- 9 Locations at launch: Sycamore State Park, Wegerzyn Gardens, Oregon District/Downtown Dayton, Carriage Hill. **Cox Arboretum and Germantown Dam deferred** pending photographs — built as drafts.
- 9 Locations may publish with known fields completed and unknown fields omitted.
- 29 Messenger: <https://m.me/311951671232> — numeric page ID; the page has no username and Meta no longer offers them. Must always render as a "Message me" button, never a raw URL. **Google Voice (513) 318-7278 is the only number published anywhere**, including business cards. No personal number, no personal profile links, no Facebook vanity URL.
- 30 **Eleven** Pinterest boards created. **Nine** link from session pages at launch. Two ("Choosing Right Size Art," "Decorate Your Home & Photo Gifts") reserved for the unpublished Resources page.

59 Hosting: **Cloudflare Pages**. Framework: **Astro**.

62 Build path: Claude writes files → Julie uploads to GitHub via web interface → Cloudflare builds preview → approval → production. Claude Code migration later if update volume justifies it.

Open items

Before build: *(all resolved)*

- Canonical Pinterest board URLs — resolved, eleven boards
- Messenger link — resolved, numeric page ID
- ShootProof booking URLs — resolved, one general plus three per-tier

One open cosmetic item: the Full tier's booking URL still reads `/booking/the-standard` from before the rename. Rename the ShootProof session type or accept the mismatch.

Before launch:

- Signed releases for portfolio images
- Homepage hero image
- 12–20 homepage mixed portfolio images
- Category galleries: Families, Seniors, Maternity, Couples
- Location galleries: 4–10 images each
- Location logistics confirmed: walking, restrooms, parking, accessibility
- About photo and final About copy
- Final logo, thicker handwritten wordmark, sun icon, favicon
- Subdomain DNS record added in Shopify

Deferred:

- Cox Arboretum and Germantown Dam locations
 - Location videos
 - Specials, Resources, Albums & Keepsakes, Local Favorites, Prop Library (built as hidden skeletons)
 - Design/order service as a named offering
-

A note on the design/order service

Worth revisiting once the site exists. Designing a gallery wall — sizes, layout, vendor, ordering — is roughly 90 minutes of work. At a 25% design fee on a \$600 order, that's about \$100/hour, more than double your session rate.

The two Pinterest boards already created for it are the seed. When it becomes a named, priced service it earns a place on the site rather than a footnote, and it's the natural bridge between the portrait side and the wall-art side of the brand.
